TUMOUR REGISTRY

CANCER INSTITUTE SIRIRAJ HOSPITAL

STATISTICAL REPORT

1984

FACULTY OF MEDICINE SIRIRAJ HOSPITAL
MAHIDOL UNIVERSITY

Introduction

This volume, the 1984 annual report of the Tumour Registry of Cancer Institute Siriraj Hospital, is the 18 th report of our series. The terminology and classification in this report follows the ICD coding system of WHO. Two changes, we would like to note are :- the heading of table VI was changed from "Ten Leading Sites" to "The Common Site" which may be included more than ten sites, and the term "Colorectal Cancer" used in the volume, composed of those occurred in colon, rectum and appendix

It is worth to note that, in male, the number of bronchus and lung cancer moved up from the third to be the first, on the contrary, the liver cancer is declined to be the third. In female, the common cancer are lined quite the same to the previous year.

On behalf of the executive committee, I would like to express our gratitude to the staffs of Tumour Registry for their high responsibility to accomplish this report in time.

NIVAT CHANTARAKUL, M.D.

Chairman

Executive Committee Cancer Institute

Siriraj Hospital

Faculty of Medicine, Mahidol University

Bangkok 10700, Thailand

VI 1984
TABLE I
NUMBER OF PATIENT

Type of patient	No. of Cases
Total No. of Out Patients	987,829
Total No. of New Patients	231,140
Total No. of New Patients with Malignancies	3,298

The cancer cases are 1.42% of all new patients

1984
TABLE II
DIAGNOSIS

Diagnosed by	Number	Percentage
Histological proof	3,209	97.30
Clinical & X-ray	89	2.70
Total	3,298	100.00

TABLE III
NUMBER OF MALIGNANT NEOPLASM BY AGE AND SEX

Age-group	No. of Cases		Total	%
